Model:	GSE 60-series	Date:	21 Dec 09
Title: Entering text in a 660 series model			

Overview

For programs developed before the alpha keypad entry was available, text was scrolled in using the function keys. On an indicator the layout of the functions keys made this fairly intuitive but on the 675 the function keys are placed in a line under the display.

Requirements

660 series indicator or 675 bench scale.

Procedure

To enter text, each character must be scrolled in one at a time as follows:

F1	Scroll up
F4	Scroll down
F5	Next character
F3	Previous character
